Torrent Tile : WALLS

MODULAR & CUSTOM

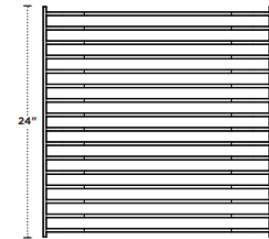

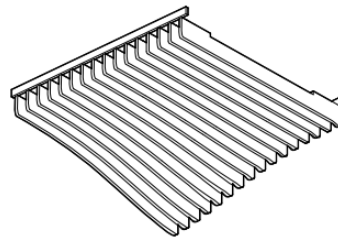

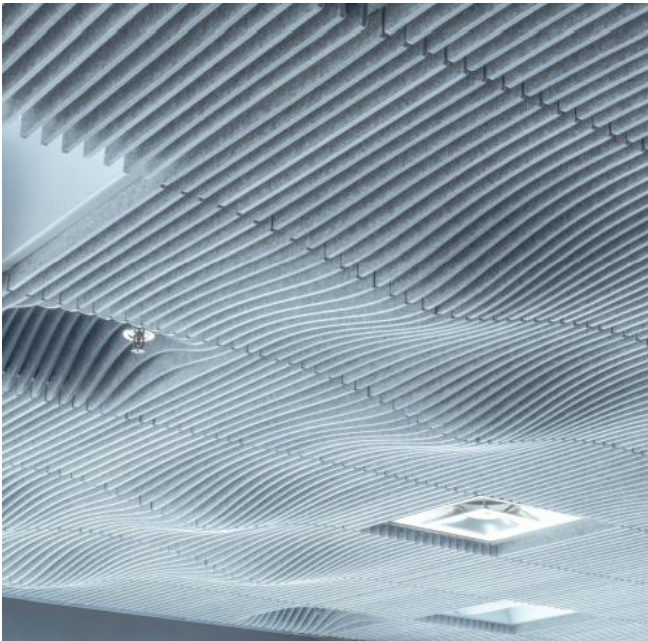

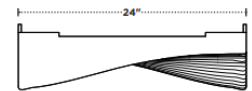

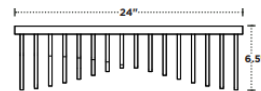

The Torrent tile is a modular acoustic tiling system that can be easily configured to create "custom" wall sculptures. With only three modular Torrent Tiles, endless varieties of undulations, ebbs and flows, and transitions can be created within any interior environment.

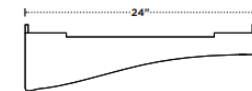

Torrent Tiles are designed so that their vertical slats can be reconfigured from **Right-to-Left** to **Left-to-Right**. This allows the undulation to continue horizontally and vertically by simply mirroring the files.

TILE B

Swell : CEILINGS

SCULPTURAL & TRANSFORMATIVE

The Swell Ceiling System is a drop ceiling product series that transforms office interiors through both cutting edge aesthetics and acoustical performance. Made from our 99% recycled PET felt, the five modular tiles can be rotated and configured in multiple orientations to create endlessly customizable ceiling sculptures.
